High purity, extreme load dry film molybdenum disulphide paste designed for use where a wet lubricant cannot be tolerated.

DRY MOLY Paste is an assembly lubricant for sliding surfaces such as plain bearings, pins, cams and slides intended to reduce friction and therefore increase life of moving parts in highly corrosive environments.

DRY MOLY Paste can also be used in conjunction with a wet film lubricant enhancing performance and extending life of components and assemblies.

[fluid.](#) and as a [spray](#) Also available as a

\*Dry film coating of molybdenum disulphide in paste form.
