

FOODLUBE Extreme

- Clay thickened, adhesive formulation provides extreme water wash-off resistance to guard against corrosion
- Reduces wear to significantly extends component life
- EP additive package ensures outstanding performance, even at high loads
- Excellent oxidation stability extends re-lubrication intervals, reducing total cost of ownership
- 21469 certified for full audit compliance ISO H1 registered & NSF

is an organo-clay thickened grease. Its adhesive, non-melting formulation provides extreme corrosion protection, even in **FOODLUBE Extreme** wet conditions and applications such as dairies, meat processing and abattoirs where frequent wash-downs are common. FOODLUBE Extreme is ideal for lubrication of ball, roller and plain bearings, as well as slides and bushes, where there is metal-to-metal contact. The grease significantly reduces frictional heat and wear to enhance performance and extend component life. To protect against lubricant deterioration from microbial activity, FOODLUBE Extreme contains an anti-microbial compound, which along with the anti-oxidant additive package greatly extends the life of the grease – reducing re-lubrication frequency and total cost of ownership. technology metal detectable cap on grease cartridge reduces risk of plastic contamination, and FOODLUBE Extreme is NSF H1, [DETEX](#) The ISO 21469 and Halal certified for full audit compliance and peace of mind.

*Food grade grease for extremely wet applications
