Description

ROCOL Metal Enriched Paints have a Triple Protection formula, which has been developed by ROCOL scientists to exploit the chemical properties of Zinc and an advanced resin system to shield steel from corrosion.

Excellent corrosion protection. This heavy duty cold galvanising spray can be used to repair the surface of galvanised components that have been damaged or removed due to welding or other mechanical operations.

The differences between standard paints and ROCOL Metal Enriched Paints are significant. Standard paints create a passive barrier, which when breached will offer no protection against corrosion. Rust will begin to form underneath the paint, quickly removing it from the surface.

*Optimum galvanic protection, heavy duty cold galvanising spray.
