Description

FOODLUBE Hi-Torque is a range of food grade, fully synthetic gear oils that minimise wear, thereby reducing risk of breakdown and significantly extending gear box life. FOODLUBE Hi-Torque is proven to extend oil change intervals to up to 4 years.

*FOODLUBE Hi-Torque incorporates the [ROCOL Start Up Protection System](#), a unique additive package that ensures gear teeth are lubricated on start-up, even after a prolonged shut-down.

Unlike traditional gear oils where gear teeth are unprotected until enough oil has worked its way around the gear teeth, SUPS technology leaves gear teeth coated with oil after shut-down. On start-up, oil instantaneously climbs the gears to provide maximum protection. [Watch our video to see SUPS in action!](#)

The SUPS technology also protects against micro pitting which is one of the most common forms of gear teeth failure. FOODLUBE Hi-Torque is fully compliant with food industry standards, with NSF H1 registration, ISO 21469 certification and [Halal approval](#).

Available in 150, 220, 320 and 460 cSt viscosities to protect all gear box applications within the food industry.

*Food grade gear oil with start up protection system
