Description

MOISTURE GUARD Green Spray is a thin, almost dry corrosion preventative film suitable for the temporary indoor protection of components such as bearings, gears, pressings and any machined metal product which requires protection from corrosive attack – whether in storage, transit or between operations.

MOISTURE GUARD Green Spray protects against damp atmospheres and condensation attack. After 1000 hrs accelerated humidity cabinet testing, moisture guard treated steel remains free from corrosion.

MOISTURE GUARD Green Spray is ideal as a visible, medium/long term indoor corrosion protection of bare metal components and mould tools particularly where condensation is a problem.

*Five year indoor corrosion protective.
